

LOGGING

Etere equips users with the software tools to analyze audience data, insert logos/timcodes, view/edit recordings, and log clips for compliance with regulatory requirements and delivery to OTT, VOD, social media platforms.

Memory Browser

Logging

etere memory

Etere Solutions manages the end-to-end media lifecycle of broadcast and media enterprises. Under the reliable web of the Etere Ecosystem, streamline your entire workflow with Etere solutions that feature seamless integration and useful operability. As the world's first producer of software-only broadcasting solutions, Etere Solutions will declutter your control rooms, increase productivity, and encourage a better range of adaptability and scalability. Take the first step to achieving the results-driven success that you want. We can help you attain results that are tailored to your success.

Broadcasters must ensure their aired content is logged and available online to comply with regulatory requirements and export content easily. With Etere, users can record any and all content broadcasted from multiple mediums and platforms, archive it, and enable simultaneous users to monitor the live or archived content.

Etere Memory

Etere Memory provides broadcasters with a reliable compliance logger that records and stores all transmitted video and audio in a low-resolution format (Mpeg4/WMV). This enables operators to fulfil all broadcast recording laws. It also allows content creators to repurpose their content cost-effectively and easily.

EPG/As Run log integration

Integration with any EPG or As Run Log from any automation system provides alternative tools for searching and finding specific content. These files can be automatically loaded into the system, manually loaded, or taken from the Internet. It allows playing or clipping the relevant content directly from the EPG or As Run Log. Automatic import of common as-run logs simplifies finding content for ad verification and compliance purposes.

Closed caption/SCTE/DVB-Subtitles/Teletext/Multiple audio tracks

Recording of DVB subtitles closed captions, or Teletext and being able to monitor them are requirements of broadcasters to comply with regulations and maintain quality of service.

Key Features

- HTML5 player for web/desktop browsing and H264 (MPEG-4) compatibility
- Compliance logger that complies with all the TV regulatory requirements, such as the FCC, in one platform
- Streaming out of content for remote control of video
- Live clipping for OTT and social media
- Video-on-demand (VOD) clipping
- HTTP, UDP, RTSP & RTMP streaming to the flash media server and Wowza Media Server
- Supports analogue and digital video capture boards
- Data protection and advanced redundancy to record files on remote servers
- Unlimited and simultaneous clients/recordings, multiple viewings and editing
- Embedded time code on recorded videos
- Automatic detection and SNMP notifications for black and frozen video issues
- Metadata marking to identify and search key video parts
- Audience data insertion into logged video files and competitors' record checks
- Supports insertion of logos and timecodes, supports annotation on video
- Includes Etere HSM archiving at no additional costs
- Integration with loudness check and preview with Etere Audience
- Works from different devices: PC, MAC, iPads, smartphones
- Web-based broadcast logger – no client installation is needed; access from anywhere
